With Rampart AI™

Write Code

Make Changes

Monitor

Rampart™ continuously monitors your application for anomalies and provides deep insight into its structure and behavior.

Prevent Vulnerabilities

By alerting and blocking problematic behavior when it occurs, Rampart™ can protect against known and unknown vulnerabilities.

Plan Your Software

Test

Release Application

Deploy your application to production with the Rampart™ agent attached.

Block/Alert

When something unusual occurs, Rampart™ provides details of what went wrong and where. Rampart uses customizable enforcement policies to block problematic misbehaviors (policies can be edited on the fly without restarting your services.)

Run as expected

Rampart™ works with your CI workflow to ensure that your application will continue to run as expected across patches and redeployment.
